

DISCLAIMER

- 1. Reprocessing of Volk Optical product that contacts a patient should follow a two-step process in all situations. The device should be (1) thoroughly cleaned then (2) either disinfected <u>OR</u> sterilized.
- Volk Optical product designated as "non-contact" is recommended to be cleaned thoroughly at a frequency determined by the discretion of the practitioner. Non-contact product does not require disinfection or sterilization; however, periodic disinfection is recommended.
- 3. Volk Optical offers common industry-established product reprocessing guidelines, but has not validated every possible reprocessing technique, or every set of possible reprocessing parameters. Always follow the reprocessing procedures listed in Volk's Instructions for Use, of your hospital, or your facility, and contact Volk regarding product compatibility with alternative reprocessing methods, or emerging technologies, where applicable.

CLEANING

- 1. Cleaning should be performed regularly to remove bodily fluids, dust, and soils from the surface of the product.
- 2. Select the appropriate method of cleaning from the CLEANING METHODS TABLE listed below.
- 3. If a product is to be sterilized prior to its re-use, Volk recommends that it first be cleaned using cleaning Method C.

CLEANING METHODS TABLE

Method A:	Clean with a mild, pH neutral detergent and a clean soft cotton cloth or swab. Do not use detergent with any type of Emollients.
Method B:	LensPen [®] Clean lens surface in a clockwise direction to help prevent loosening of the insert in the ring.
	CAUTION: Do not use the Volk LensPen [®] or Volk's POLC on surfaces that contact the eye.
Method C:	 Prepare fresh enzymatic cleaner (e.g. Enzol) solution – 2 ounces per gallon using warm (~30-43°C) tap water.
	2. Soak each device in solution for 20 minutes.
	3. After soaking, brush knurled surface of housing with a soft-bristle brush and wipe lens portion with a soft cloth until all traces of cleaner and soil are removed. Pay special attention to all crevices and other hard-to-reach areas. Note: Do not brush lens portion to avoid scratching; use soft cloth.
	4. Thoroughly rinse devices in a room temperature tap water bath (not under running water) until all visible cleaner has been removed.
	5. Transfer the devices to a freshly prepared enzymatic solution (per step 1 above) and sonicate for 20 minutes.
	After sonication, thoroughly rinse devices in a room temperature tap water bath (not under running water) until all visible cleaner has been removed.
	Inspect each device for remaining debris. If any is observed, repeat the cleaning procedure with freshly prepared cleaning solutions.

- Whenever possible dry Volk lenses with an ultra-soft, low-lint, cotton cloth such as a cloth diaper.
- Cleaning Method C is the preferred method for cleaning Volk's 2-piece autoclavable (ACS) vitrectomy lenses (e.g. Mini Quad ACS, Central Retinal ACS, etc.). However, the sonication step of Cleaning Method C may cause lens damage, which limits the useful life of these lenses. Use of an alternate validated cleaning method that does not include automated sonication is highly recommended by Volk Optical whenever practicable for these lenses.

DISINFECTION

- 1. Clean lens & surgical products first by following Cleaning Method A (See CLEANING METHODS TABLE)
- 2. Disinfect by selecting one of the solution types from the Table below:

Product Type \checkmark = OK to Use	*Cidex OPA	*Glutaraldehyde	**Bleach Solutions (Sodium Hypochlorite)	*Revital-Ox [™] Resert XL [®] HLD	Perasafe	Bode Mikorbac Tissues	Alkacide / Alkazyme	CaviWipes

* When using immersion solutions such as: CIDEX OPA, GLUTERALDEHYDE, & REVITAL-OX™ RESERT[®] XL HLD refer to Manufacturer's Instructions.

- Position the lens on its side, and then immerse the entire lens in the selected solution for the listed soak time.
- Remove the lens from the solution, thoroughly rinse with room temperature water, and dry with a soft lint free cotton cloth.
- ** When using BLEACH SOLUTIONS (NaCIO, Sodium Hypochlorite; household bleach), prepare the following solution:

Solution Type	Example Dilution	Minimum Soak Time	Maximum Soak Time
0.525% (5000ppm) Sodium Hypochlorite Solution (NaCIO) (household bleach)	1 Part 5.25% NaClO : 9 Parts Water Ambient/ Room Temp 62° – 72°F (16.67° – 22.22°C)	10 Minutes	26 Minutes

- To avoid surface damage to contact lenses, never clean the contact elements with alcohol, peroxide or acetone.
- Do not use the Volk LensPen[®] or Volk's POLC on surfaces that contact the eye.
- Colored rings may discolor when exposed to higher concentrations of Sodium Hypochlorite or Glutaraldehyde, or for longer periods of time. To avoid discoloration please follow only the <u>disinfection</u> procedures indicated for these products.
- Extended exposure to recommended concentrations, and/or exposure to higher concentrations of Sodium Hypochlorite will result in accelerated degradation of most Volk product. Avoid extended exposure to bleach solutions.
- Contact Volk regarding product compatibility with other disinfection methods.

DISINFECTION CONT.

Pictor & Pict	or Plus Digital Imaging Device
Camera Handset Retina Module Anterior Module FA Module Otoscope Module Cradle	 Disinfect housing with soft cloth moistened with alcohol (e.g. 70% ethyl alcohol). NOTE: Avoid touching system connectors in the handset and cradle.
Dermatoscope Module & Glass	 Disinfect glass with soft cloth moistened with alcohol (70% ethyl alcohol), or Remove glass and soak it in glutaraldehyde-based solution, or hydrogen peroxide & peracetic acid solution.
Silicone Eyecup	 CAUTION: The Silicone Eyecup should be disinfected before each use on a new patient. Disinfect Silicone Eyecup with a soft cloth moistened with alcohol (70% ethyl alcohol), or Soak silicone support in glutaraldehyde-based solution.

- Shut down device before cleaning.
- Remove the Cradle from MAINS power before cleaning.
- Pictor is not intended to be sterilized.

• STERILIZATION

- Cleaning should always be performed prior to sterilization. Volk recommends that <u>most</u> products first be processed using cleaning Method C^{††}. See CLEANING METHODS TABLE and observe stated PRECAUTIONS.
- 2. Sterilize by selecting one of the methods from the Table below:

Product Type ✓ = OK to Use	ETO	Steam	[†] Sterrad [®]	Amsco [®] V-Pro [®]	TSO₃

NOTE: The use of a Volk Sterilization Case or Tray is recommended to avoid product loss or damage.

Ethylene Oxide:	Follow hospital procedures with aeration up to, but not exceeding 150ºF / 66ºC for non-contact lenses or 130ºF / 55ºC for contact lenses.
Steam Sterilization:	US - Pre-vacuum, wrapped, 132°C minimum, 4 minutes (lenses), dry time 20 min Note - MERLIN [®] components require 5 minutes cycle time
	EU / UK - Pre-vacuum, wrapped, 134°C minimum, 3 minutes (lenses), dry time 20 min
Amsco [®] V-Pro [®] :	Applicable sterilization systems: V-Pro [®] 1 Low Temp, V-Pro [®] 1 Plus Low Temp, V-Pro [®] maX Low Temp. 28 minute non-lumen cycle, 12 minute sterilant exposure, 2.1g sterilant injection per pulse (~59% H ₂ O ₂), 0.4 -1.0 Torr pre-injection pressure, and a 50°C chamber temperature.
[†] Sterrad [®] :	Use in the 100S Short Cycle or use in 100NX Express (available outside the US only). Caution: Rings may discolor after multiple reprocessing cycles.
	DDEC AUTIONS:

- To avoid lens surface damage, never clean a lens' contact element with alcohol, peroxide, or acetone.
- Do not use the Volk Lens Pen® or Volk's POLC on surfaces that contact the eye.
- Disassemble 2-piece vitrectomy lenses (e.g. Mini Quad ACS, Central Retinal ACS, etc.) prior to cleaning and sterilization.
- ⁺⁺ Cleaning Method C is the preferred method for cleaning Volk's 2-piece autoclavable (ACS) vitrectomy lenses (e.g. Mini Quad ACS, Central Retinal ACS, etc.). However, the sonication step of Cleaning Method C may cause lens damage, which limits the useful life of these lenses. Use of an alternate validated cleaning method that does not include automated sonication is highly recommended by Volk Optical whenever practicable for these lenses.
- Contact Volk regarding product compatibility with other sterilization methods.
